Department of Pathology
Clinical History

- 45 yo female seen for routine gynecologic care in summer 2010
- PMH: Uterine fibroids and hypothyroidism
- U/S ordered as routine follow-up for fibroids, showing an 8 cm left adnexal cystic mass
- Symptoms (retrospectively): Mild LLQ discomfort and low back pain; no abnormal vaginal bleeding or changes in menstruation
- BSO performed yielding a left 8 cm multiloculated cystic mass with foci of hemorrhage but lacking papillary excrescences
